### 4. Streaming CSM

Streaming CSM is a tool that helps analyze the currency appreciation that used for analyzing the strength of the major currencies. The currency appreciation will fluctuate based on the trading force in market. The Streaming CSM helps to consider an investment in order to choose a currency pair for investment. Also, used for the consideration of each trading. The time frame for showing Currency Strength will be shown as an overview of each day, which will calculate the real time value which will be divided into consideration levels from 0 - 9.9 as follows:

4.1 Levels 0 - 1.9 means the value of that currency is **VERY WEAK** appreciation when compared to other currencies that have more value.

*Investors should consider investment status as **Short***

4.2 Level 2 - 3.9 means the value of that currency is **VERY WEAK** when compared to other currencies that have more value.

*Investors should consider investment status as **Short***

4.3 Levels 4 - 5.9 refers to the value of currency having a **MEDIUM** currency appreciation value. That currency can be changed to a weak or appreciable value which must be considered based on many factors such as Trend line, news, and other factors that affect that currency pair.

4.4 Levels 6 - 7.9 means the currency's value is having **STRONG** appreciation compared to other currencies that have a smaller value.

*Investors should consider investment status as **Long***

4.5 Levels 8 - 9.9 or higher means the currency's value is having **STRONG** appreciation compared to other currencies that have a smaller value.

*Investors should consider investment status as **Long***

## 5. Position strength

Position strength is a tool for determining market trends in the overview of each currency with the algorithm system. It will show detailed analysis in 24 currency pairs, which will measure the trading volume in the market (Short and Long) for easy consideration and easy to see the overview of market conditions in each currency that can be divided into following principles:

The calculation is in percentage from 0 - 100 percent, divided into 3 phases of analysis as follows:

#1. Long phase: The analysis value of 60 – 100 shows the currency pairs of that period. There are the investors in the market holding the Long (Buy) status at less amount.

**\*Suggestion:** Investors should hold Long (Buy) position and other factors that affect the currency pair should be considered as well.

#2. Short phase: The analysis values of 0 - 35 shows the currency pairs of that period. There are a few investors in the market holding a long position (Buy), which leads to have the opposite effect that causing investors to hold Short (Sell) status in a large amount.
